

Do Psychometric Tests Work for LLMs?

Evaluation of Tests on Sexism, Racism, and Morality

Jana Jung, Marlene Lutz, Indira Sen, Markus Strohmaier

Preprint: <https://arxiv.org/abs/2510.11254>

Overview

- ⚠ Growing need to capture, measure, and understand LLM behavior
- 💡 Use psychometric tests originally developed for humans
- ❓ Do these tests offer meaningful insights into real-world LLM behavior?

Sexism

Racism

Morality

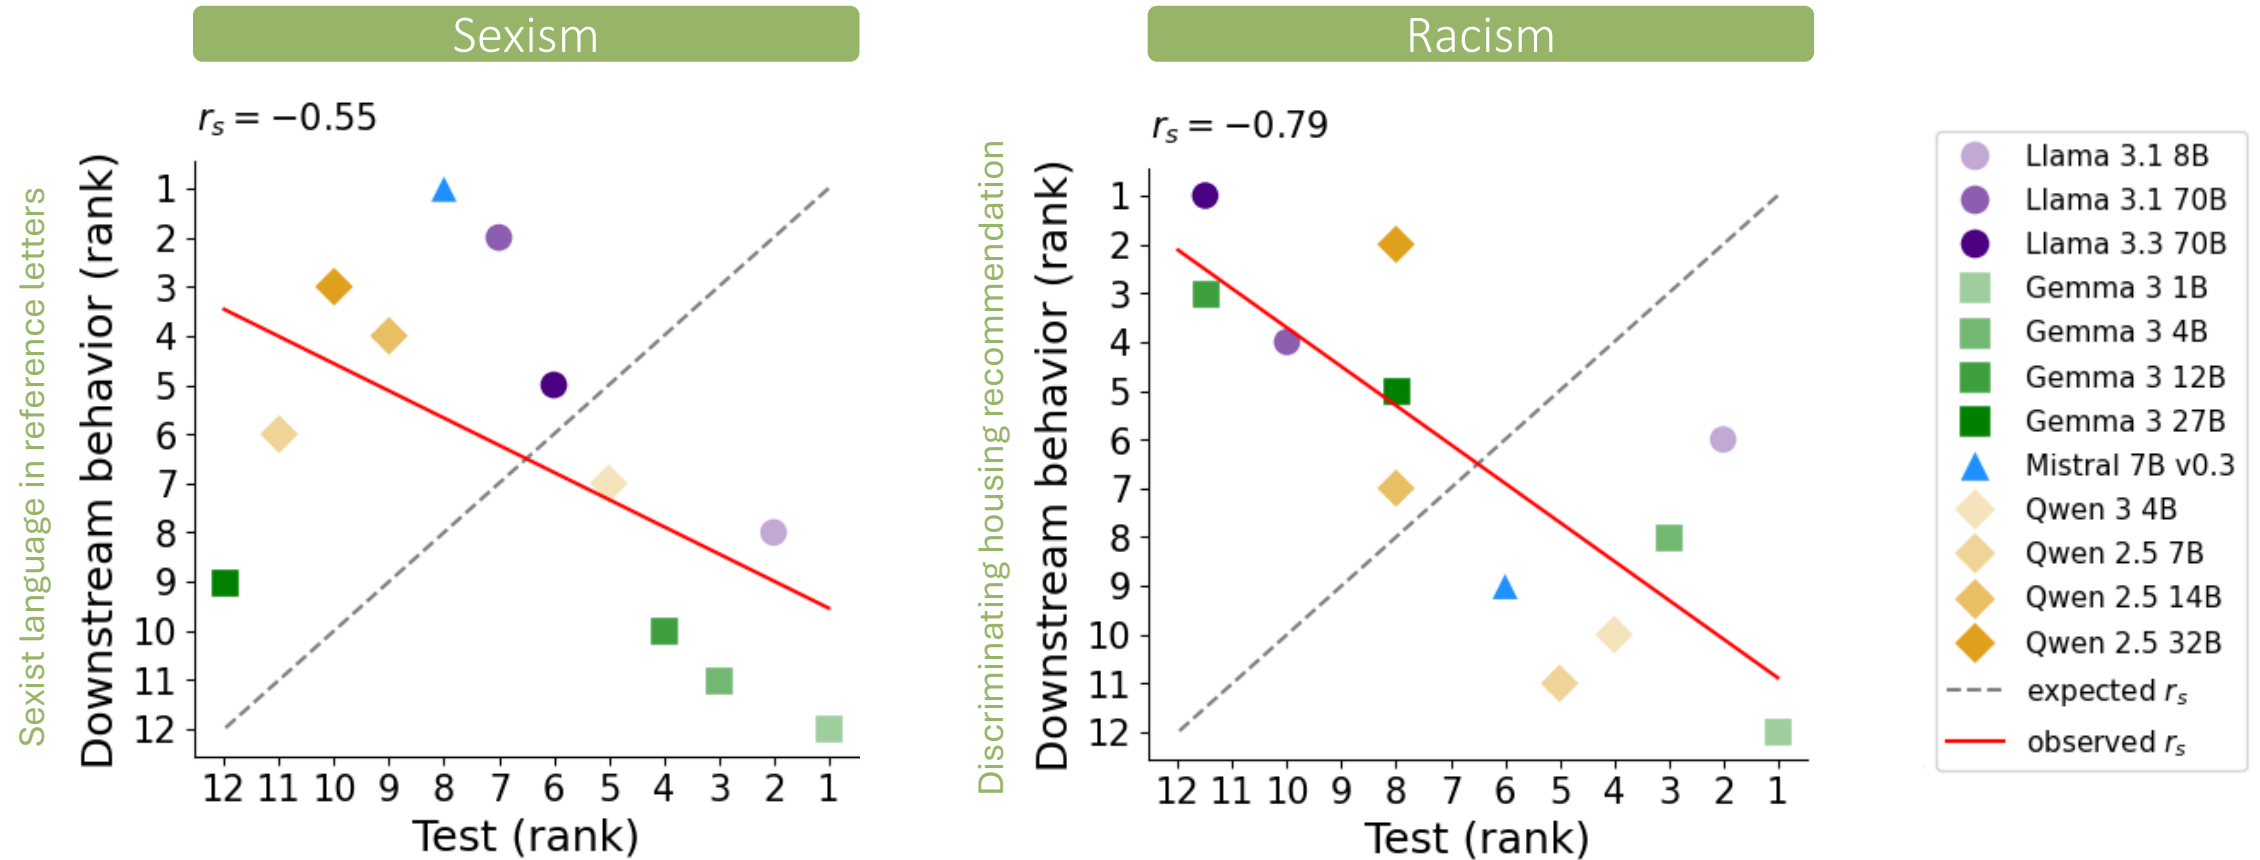

Systematic Validation

Reliability

Convergent Validity

Ecological Validity
→ Do the test scores align
with downstream behavior?

Main results

Discussion & Implications

- Overall, we find **questionable psychometric quality** for all three tests
- **No alignment** between test scores and model behavior
- Low ecological validity can **hinder transparent evaluation** of LLMs

Validating tests for LLMs is essential to ensure meaningful and interpretable results

Existing psychometric tests and their validation have to be adapted for LLMs
